

Instructions for downloading wallpapers:

1. First of all you need to choose which wallpaper you would like to have displayed on your desktop!
2. You then need to find out the screen resolution of your computer by right clicking on your computer's desktop (with your mouse) and then select 'Settings'. The screen resolution should show up in this box.
3. Once you know your screen resolution, go back to the wallpaper page in your internet browser and select the option (800x600 **or** 1024x768) of your favourite wallpaper, which is closest to your screen resolution. Right click on the link and save it into one of your files (don't forget where you save it!)
4. Go to the 'Control Panel' of your computer and then to 'Display'.
5. Select the 'Desktop' option, click on 'Browse', find the saved wallpaper in your files, click on 'Open', then click 'Okay'.
6. Go to your desktop and you should see the wallpaper!
7. Tell your family and friends about the wallpapers and get them to download one too!
